Recommendations Guidelines Determinations Regulations

Public and semi public space
✓ restaurants, toilet facilities
✓ offices, public authorities
✓ airports
✓ railway stations
✓ service stations and areas

§ determination: Law on preventing and combating of infectious diseases in humans (IfSG) - Article 1 of the act on the restructuring disease legislation (SeuchRNeuG) of 20 July 2000 (Federal Law Gazette I 2000 p. 1045)

In army facilities: Washbasins in army kitchens must be equipped with contactless-controlled faucets and dispensers for soap and disinfectant.

On motorway service areas: In the public toilet area of service areas washbasins have to be equipped with electronic faucets generally.

§ determination: Introduction by Federal Minister of Transport, set up by the Society for ancillary operations of the Federal Motorways Ltd. (GFN).

Food hygiene
An essential principle of all health conditions is to eliminate negative influences on food. The needed measures, requirements and terms of reference to meet these demands are defined in detail in individual nationwide hygiene regulations. As close as possible to the working place, shall be provided a sufficient number of facilities for cleaning and disinfection hands.

Veterinary and food control agencies recommend also touchless faucets and dispensers for the cleaning and disinfection of hands, even if the Food Hygiene Regulation does not explicitly recommend this (object-specific motion).

Areas in which faucets must be touchless operable by hand are especially meat, milk and fish handling and processing companies.

§ determination Food Hygiene Regulation: Article 1 of the Ordinance on Food Hygiene and amending the food transport containers Ordinance of 05 August 1997 (Federal Law Gazette I p. 2008), CHANGED by Article 2 §2 V of 21.05.2001 (Federal Law Gazette I p. 959)

 ✓ Meat hygiene regulation: Regulations on the hygiene requirements and official investigations in the marketing of meat (FIHV) of 29 June 2003 (Federal Law Gazette I p. 1367); amendment by ordinance amending meat and food hygiene legislation Last Mod. 21 February 2003 (Federal Law Gazette I p. 244)

 ✓ Poultry Meat Hygiene Regulation: (GFHV) of 21 December 2001 (Federal Law Gazette I p. 4098); as last amended by Article 2 of the Fourth Amendment Regulation on meat and poultry meat hygiene regulations of 16 July 2004 (Federal Law Gazette I p. 1697)

 ✓ Fish Hygiene Regulation: Regulation on the hygiene requirements for fishery products and live bivalve molluscs (FischHV) promulgated the revised version of 08 June 2000 (Federal Law Gazette I No. 27 p. 819), changed by Article 1 of the Ordinance of 02 April 2003 (Federal Law Gazette I p. 478)
Definition: EURO dispenser -
Sensor dispenser with quick and easy handling, that everyone understands and free choice of soap and disinfectant

Easy handling
Touchless dispensers are easy and accurate to handle and provide an important basis for hygienic work process. With the product series EURO dispensers, INFRATRONIC SOLUTIONS offers versatile models, which are especially distinguished by an easy handling. Under the recommendations of the Robert Koch Institute, all dispenser systems are conceived so that the workflows of the doctor and the team are supported and a smooth daily routine in the doctor's office is guaranteed.

Correctly and consequently executed hand disinfection reduces the danger of contaminations and infections fundamentally. The touchless and sensor controlled activation enables a quick and easy release of the liquids, without the dispenser itself becoming the source of germs. The contactless release prevents the transfer of the germs by cross-contamination, e.g. when you touch the handle. The ergonomic design and smooth stainless steel surfaces ensure an easy usage and cleaning. The large inspection window makes the regular view on the liquids possible. By the usage of all EURO bottles up to 1000 ml and the patented tube dosing pump inside the hygiene dispenser the cleaning and disinfection of the interior of the dispenser, as it is necessary at other equipment, are not longer required. Liquids can't collect inside the dispenser, valuable cleaning time will be saved.

Durable and tough
The easy installation with batteries (approx. 2 years durability) enables a upgrade anytime. The dispensers can always be operated with mains current. Because of the impact-resistant box and the option to replace components as service part, hygiene dispenser by INFRATRONIC SOLUTIONS are especially durable and tough. Consumable supplies can be stored tamper-proof in the box with the optional inspection window. Thereby the dispensers are also eminently suitable for public and semi public spaces.

Extended product range
Getting soap, hand-washing, drying hands, disinfection and hand care (cream) are contactless possible with IT products. Suitable to the hygiene dispensers INFRATRONIC SOLUTIONS offers mobile dispenser systems, accessories and touchless faucets and paper dispensers.

In combination with the hygiene cabinets you can furnish both hygienic and ergonomically convenient work areas. Protected from aerosols and other contaminations the wall units hold besides the hygiene dispensers for disinfection and soap also consumable supplies like cups, paper, gloves and mouth masks ready. The utility space on the shelf keeps free. Because of the flexible fastening system you can place the complete equipment freely, integrate it versatile and adjust it effortlessly. The individual disposal of the equipment - e.g. the application device for gloves, which can hold several different sizes simultaneously or the dispenser for oral rinse cups - enables adequate installation of wash and work areas. The cabinets are ideal as practical assistants for more arrangement and an easy hygienic use.

Areas of application
medical area
• doctor's offices
• hospitals
• laboratories
• nursing homes
• and much more

public and semi public space
• changing room

• milk processing companies
• fish processing companies
• meat processing companies
• commercial kitchens
• restaurants

private area
• kitchen
• bathroom
• toilet

Manufacturer-independent EURO bottles
Flexibility with the choice of the used disinfectant or soap plays more and more an important role with the users. Due to the bottle adapters included in delivery, it is possible to use all manufacturer-independent EURO bottles up to 1000 ml and to void the bottles 100% without any residual content! The possibility to use different compounds like disinfectant, fluid cremes or gel allows a versatile usage of all hygiene dispensers.

All prices are retail price excluding VAT. Subject to change.
Hygiene dispenser for wall mounting

Under the guidelines of the Robert Koch Institute dispensers should be activated contactlessly.

A dispenser system, that you can apply accessibly in the whole world - independent from medium, bottle, consistence and power supply. This has been our first priority, which we've reached with IT 1000 AW EURO (plastics) and IT 1000 AE EURO (V2A stainless steel).

By the supplied bottle adapter set the dispenser system is compatible to 500 up to 1000 ml EURO bottles. In combination with the universal tube dosing pump you are independent in the choice of soap and disinfectant, regardless what consistence.

Handling

The easy handling supports the implementation of the German RKI recommendation for infection prevention and the compliance of the legislature’s general conditions.

The sensor dispenser expenses the preset volume of thick or thin disinfectant and soap as well as liquid cream.

Maximum flexibility

Both versions enable the manufacturer-independent usage of EURO bottles. Bottle adapters guarantee the compatibility to other customary 500 ml up to 1000 ml EURO bottles. Furthermore a refill tank is available.

Hygienic and maintenance-free

The ergonomic design and the smooth surface enable an efficient cleaning. Due to the intelligent technology no liquids can collect inside the device. Maintenances are not necessary for operating.

Benefits

- manufacturer independent from the choice of bottles up to 1000 ml, without decanting
- no cleaning effort inside the dispenser because of the disposable EURO bottles and the exchangeable universal pump
- amount per release approx. 1.5 ml

- mains current or battery
- vision panel for monitoring the filling level
- complete clearance of the bottles
- lockable
- no after-dropping

Item no. 19060-ral3020
IT 1000 AP EURO
Material: V2A stainless steel, RAL powder-coated
Hygiene dispenser for oral rinse

Under the guidelines of the Robert Koch Institute patients at the dentist should rinse before every procedure to minimize the risk of infection for the doctor, the team and the patient.

By oral antisepsis you can reach a considerable reduction of the microbial flora in the saliva and on the mucosa. The concentration of germs in aerosol will be also reduced.

For this area of application we’ve developed the touchless hygiene dispensers for oral rinse. The innovative sensor technology in combination with the manufacturer-independent usage of oral rinse leads to a highly attractive system, which simplifies the workflow during the treatment as well as saves valuable time and expensive resources.

Handling
The hygiene dispenser configured by the controller automatically releases the preset volume as soon as the cup will be placed under the dispenser. In the meantime the doctor’s assistant can prepare the patient to hand the cup filled with oral rinse to him.

Maximum flexibility
Both versions enable the manufacturer-independent usage of EURO bottles. Bottle adapters guarantee the compatibility to other customary 500 ml up to 1000 ml EURO bottles. Furthermore a refill tank is available.

Hygienic and maintenance-free
The ergonomic design and the smooth surface enable an efficient cleaning. Due to the intelligent technology no liquids can collect inside the device. Maintenances are not necessary for operating.

Benefits
✓ free choice of bottles up to 1000 ml, without decanting
✓ refill tank available
✓ automatic release of the preset volume
✓ saving bottles
✓ report for quality management available by controller
✓ preset volume: 10,5 ml (7 repetitions)
✓ reliable application

IS Controller
Hygiene dispenser for concentrates

Controlled dosing represent a secure basis for the handling of chemicals.

They ensure the cost-effective and secure usage of chemicals. Both dispensers distinguish their simple handling and an easy installation. They enable touchlessly the automatic release of chemicals but an observation by the staff isn’t needed. So the workflows will be facilitated, valuable time and expensive resources will be saved.

The concentrate dispensers work without water supply or pipeline. By the easy installation they are a perfect option for upgrading a water abstraction system. This saves expensive reconstruction work.

Handling

The touchless dispensers are easy and accurate to operate. Completely contactless and fully automated a individually preset volume will be released. Contingent variations of the concentration too see with manual filling are impossible. So you can guarantee, that always the right dosing of concentration is used. A under- or overdosing will be avoided.

- Warning, when the content of a bottle deceeds a preset percentage (0 - 100 %)
- Amount of the used medium adjustable on a percentage basis
- Preset of volume (e.g. 1 liter, 2 liter, 4 liter)

Maximum flexibility

Both versions enable the manufacturer-independent usage of EURO bottles. Bottle adapters guarantee the compatibility to other customary 500 ml up to 1000 ml EURO bottles. Furthermore a refill tank is available.

Benefits

- free choice of bottles up to 1000 ml, without decanting
- refill tank available
- automatic release of the preset volume
- saving bottles
- report for quality management available by controller
- preset volume: 2% concentrate

Dosing dispenser for gypsum neutraliser

Under the guidelines of the Robert Koch Institute dispensers should be activated contactlessly.

The remaining gypsum which arises in dental laboratories will be collected under the sink. The hardening of the gypsum and disgusting smells are the consequence.

For this application field we’ve developed the time-controlled dosing dispenser for gypsum neutraliser. The dosing dispenser releases a selectable amount of neutraliser in the separation container in time-controlled lags. So you can prevent the hardening of the gypsum and the drain pipe and disgusting smells don’t emerge.

Handling
The easy handling optimizes the workflows, which supports the quality management. The release system is time-controlled and doses in the preset interval automatically the wanted amount of neutraliser.

Maximum flexibility
Both versions enable the manufacturer-independent usage of EURO bottles. Bottle adapters guarantee the compatibility to other customary 500 ml up to 1000 ml EURO bottles. Furthermore a refill tank is available.

Hygienic and maintenance-free
The ergonomic design and the smooth surface enable an efficient cleaning. Due to the intelligent technology no liquids can collect inside the device. Maintenances are not necessary for operating.

Benefits
✓ free choice of bottles up to 1000 ml, without decanting
✓ refill tank available
✓ time-controlled release of neutraliser
✓ easy installation
✓ automatic dosing prevents hardening of gypsum, e.g. in the pipelines
✓ no disgusting smells

Hygiene dispenser for wall mounting

Under the guidelines of the Robert Koch Institute dispensers should be activated contactlessly.

The dispenser systems are reliable in the contactless removal of disinfectant, soap and liquid cream. The accurate handling enables a important basis for hygienic working conditions. Both systems are compatible to our 1000 ml disposable bottles as well the 800-1000 ml refill tanks.

**Handling**
The easy handling supports the implementation of the German RKI recommendation for infection prevention and the compliance of the legislature’s general conditions.

The sensor dispenser expenses the preset volume of thick or thin disinfectant and soap as well as liquid cream.

**Independance**
Because of the refill tank these both dispensers are independent of the usage of different liquids. You can also use the inhouse system bottles with soap and disinfectant.

**Hygienic and maintenance-free**
The ergonomic design and the smooth surface enable an efficient cleaning. Due to the intelligent technology no liquids can collect inside the device. Maintenences are not necessary for operating.

Paper roll towel dispenser
for wall mounting

Under the guidelines of the Robert Koch Institute dispensers should be activated contactlessly.

Automatic spending
When the user lead the hand from below to the paper roll towel dispenser, it spends contactlessly a clean piece of paper roll towel in the hand.

Benefits
✓ touchless removal of the clean paper
✓ contamination free stored paper
✓ reduces paper consumption up to 30 %
✓ for single-ply or multilayer paper
✓ paper rolls up to 20 cm width and Ø 20 cm

Flexible wall mounting

The flexible dispenser rails enable a more simply handling with exchanging the bottles. The rail system will be mounted between the hygiene dispenser and the wall. Therefore the dispenser can be pulled down comfortably so you can open the above positioned lock to exchange the bottle or the batteries. When the hygiene dispenser is ready again, slide it back to its original position.

Benefits

- More simply handling with exchange bottles
- Comfortably pull down or slide upwards
- Also suitable for upgrading

Tube dosing pumps
for hygiene dispensers

For the medical section: The tube dosing pumps for thick and thin consumables like soap and disinfectants are disposable items. The same holds true for seals and adapters. By recycling with Instrucid AF (disinfection of instruments) intact seals, adapters and tube dosing pumps can be used as reusable items. You can obtain an exact instruction under www.infratronic-solutions.com. Please attend the guidelines of the Robert Koch Institute.
